## Introduction to TryByte

We are specialists in regulatory training, e-learning and consulting, within commercial aviation, government regulatory agencies, air navigation service providers and the commercial business sector. This means you benefit from our extensive expertise in these most demanding of industries.

We were established in 2002 from the amalgamation of several long established educational, consulting and creative design companies, so you can be confident that TryByte are an experienced professional company that deliver excellent dynamic results.

We will engage the right project team to provide you with the highest quality advice and on-going support matched to your needs.

## Creative

The driving force behind TryByte is a team of talented people drawn from complimentary disciplines, including aviation, education and design. We deliver creative solutions that provide hard-working effective results for our clients.

We place a lot of emphasis on the process of originating and developing a plan for a product / solution. We do this so that when the plan is implemented, we are sure it will be robust enough to exceed our client's expectations.

Our success is built on the ability to provide a service that stands out from the crowd.

## Our Approach

Just providing a service to meet the requirements of the client is not something TryByte believe in; we believe in adding value every step of the way.

Our unique approach starts with the way we work with our clients. We discuss their needs and how they operate, so we can create and provide a bespoke service. The process never stops – it continues throughout the relationship, building and improving every step of the way.

This has allowed TryByte to reduce our clients' lead times, errors and costs.

## Aviation Specific Courses

We offer training solutions through the use of engaging on-line learning experiences or blended learning (face-to-face). These are focused on providing clear and measurable outcomes that meet your business objectives.

Through our technology and educational design expertise, we are able to provide high quality dynamic training programs. This encourages sustainable deep level learning which reflects the training objectives.

- General Security Awareness Training (GSAT)
- Dangerous Goods Awareness
- Aviation Safety Management System (SMS)
- SMS Assessment Course for Regulators
- Aviation Management Course parts (1) & (2)
- Human Factors in Aviation
- Extended Twin Operations (WTOPS)

## Aviation Consulting Service

TryByte aviation consulting staff have a broad experience across the aviation sector.

Our professionals have extensive practical backgrounds working with and for commercial aviation, government regulatory agencies and air navigation providers.

Whether you are a general aviation operator looking for help with fleet or business planning, an airline or airport needing a safety management system or a civil aviation authority preparing for an ICAO audit, we can provide you with the highest quality advice and on-going support matched to your needs.
